## COMMENTS

The enclosed is responsive to the Examiner's Final Office Action mailed on March 18, 2003 and is being filed pursuant to a Request for Continued Examination (RCE) under 37 CFR 1.114. At the time the Examiner mailed the Office Action claims 13 through 44 were pending. By way of the present response the Applicant has not added, canceled or amended any claims. As such, claims 13 through 44 remain pending. The Applicant respectfully requests reconsideration of the present application and the allowance of claims 13 through 44.

The Examiner has maintained a theory of rejection for independent claims 13, 23, and 37 that these claims are anticipated under 35 USC 102(e) by U.S. Patent No. 6,005,823 (hereinafter, "Martin"). Again, the Examiner has reasoned, without further elaboration, that "Figure 2" of Martin discloses each of the claim elements of the Applicant's independent claims.

The Applicant does not understand the Examiner's reasoning.

Therefore, in the interests of moving the patent application process forward, the Applicant respectfully requests the Examiner to further elaborate on the maintained theory of rejection by **specifically itemizing, for each element** in the Applicant's independent claims 13, 23 and 37, **a precise element** in Figure 2 of Martin that the Examiner believes is sufficient to cover its corresponding claim element.

The Applicant maintains the perspective of Martin that was originally presented to the Examiner in an Office Action response mailed on March 3, 2003. This position is restated immediately below.

The Applicant respectfully submits that "Figure 2" of Martin and its associated discussion (approximately located from Col. 2, line 63 through Col. 4, line 42 of Martin) fails to disclose each and every element of the Applicant's independent claims 13, 23, 37.

In particular, although the circuitry of Figure 2 of Martin receives and processes a command packet (See, Col. 3 lines 2 through 22 of Martin), there does not exist any disclosure or suggestion that a "chunk" of a command packet is passed from a region that is clocked by a first clock to a region that is clocked by a second clock. As such, with respect to claims 13 and 23, Figure 2 of Martin and its corresponding discussion simply fails to disclose or suggest "a memory command packet chunk output" that stems from a "region clocked by a first clock" or "a memory packet chunk input" directed into a "region clocked by a second clock". Likewise, with respect to claim 37, Figure 2 of Martin and its corresponding discussion simply fails to disclose "generating a memory command packet . . . while clocked by a first clock" and "sending a memory command packet chunk to a . . . region clocked by a second clock".

As such, Figure 2 of Martin and its corresponding discussion fails to disclose or suggest each and every one of the claim elements found in the Applicant's claims. As such, independent claims 13, 23 and 37 are patentable

over Martin. The Applicant therefore respectfully requests the allowance of each of claims 13 through 44.

Applicants respectfully submit the present application is in condition for allowance. If the Examiner believes a telephone conference would expedite or assist in the allowance of the present application, the Examiner is invited to call Robert O'Rourke at (408) 720-8300. Authorization is hereby given to charge our Deposit Account No. 02-2666 for any charges that may be due.

Respectfully submitted,

BLAKELY, SOKOLOFF, TAYLOR & ZAFMAN
